Foreword

The Association of Natural Rubber Producing Countries has the pleasure of releasing the *Natural Rubber Trends & Statistics* for August 2010 bringing out updated data, estimates and forecasts gathered from Member Governments in the second week of August.

This issue also does not include a review of rubber market because this small secretariat is preoccupied with the preparations for the Association's annual events to be held in Cochin (India) from 2 to 9 October. We regret for disappointing the users for the second consecutive month. The next issue onwards will be providing a detailed analysis and review of rubber market along with a short term outlook.

The Association owes a debt of gratitude to statistical correspondents in all Member Governments for their enthusiastic support enabling timely release of this issue.

Notes

⁽¹⁾ For China, the supply side does not include the NR-content in compound rubber imported to the country (Please refer to Table 11 for the detailed data). But, the Demand side includes compound rubber consumed in the country. This partly explains the mismatch between the two.

⁽²⁾ Malaysia's Demand side does not include the quantity of NR processed into compound rubber and exported from the country (Please refer to Table 13 for data of compound rubber exported). Therefore, the two sides need not match each other.

⁽³⁾ For the Philippines, the supply side as well as the demand side does not include stock data due to non-availability.

* Indicates non-availability of the data with the government.

Notes:

(1) Data for 2010 as anticipated figures reported in mid-August 2010 by respective governments.

(2) In Malaysia, a section of smallholders does not tap the trees if rubber price is not attractive. The reported tapped area does not include the mature holdings which are not tapped. Due to this reason, year-to-year changes in tapped area need not agree with the historical trends in planting. Area under tapping changes in relation to rubber price.

(3) Due to differences in the methodology used or other reasons, the acreage data need not always agree with the data of new-planted/replanted area.
